Supporting OHTs to share data from primary care to patients and their circles of care

The opportunity

Better health is directly linked to better access to information. In today's digitally-connected world, patients want to be informed to become active participants in their care.

Currently, patients must contact multiple providers and/or hospitals to request their personal health information and must then retrieve, store, and manage this information themselves. These outdated processes can benefit from digital health technology and eliminate the burden on patients who need their health data the most.

Patients must be at the centre of their care. Health Report Manager (HRM) can support their access and use of their health information. With more information available any time, from anywhere, patients are more engaged and informed to advocate for their health and manage it appropriately.
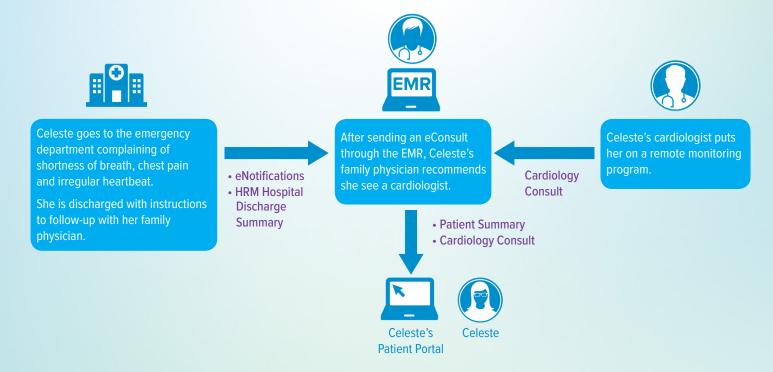

OntarioMD is working with health system partners to change the current state of sharing data. Building on its ability to deliver patient data to primary care providers' electronic medical records (EMRs), our HRM tool also has the capability to deliver patient summaries from EMRs to health care organizations and to deliver vital health data from other information systems to patients through existing patient portals. Patients can then access and manage their health data however they choose (e.g. through a portal or a mobile app).

Empowering Patients

OntarioMD is ready to work with clinicians and Ontario Health Teams to support patients with access to their own health information.

Ontario's Digital Health Playbook provides a patient scenario that illustrates how OntarioMD's delivery expertise with HRM and EMRs and partnerships with Ontario Health agencies can extend the reach of these digital health assets to more health care providers in a patient's care team and share data with patients.

EMR

Celeste goes to the emergency department complaining of shortness of breath, chest pain and irregular heartbeat.

She is discharged with instructions to follow-up with her family physician.

- eNotifications
- HRM Hospital Discharge Summary

After sending an eConsult through the EMR, Celeste's family physician recommends she see a cardiologist.

Cardiology Consult

Celeste's cardiologist puts her on a remote monitoring program.

- Patient Summary
- Cardiology Consult

Celeste's Patient Portal

Celeste

Let's work together to move patient data around the system and to patients!

Help us understand your data sharing needs and OntarioMD can help you deliver your data to patients.

Short-Term	Medium-Term	Long-Term
Patient Summary extraction from EMR to patient portal	Data sharing from OHTs to HRM to patient portal	Data sharing from EMR to provincial registries (e.g.:CDR)

OntarioMD is ready to work with you. If you'd like help understanding digital health tools, contact us at: **support@ontariomd.com** or **1-866-744-8668**.
