## Turn your EMR data into better patient outcomes

Clinicians understand the important link between patient data and effective quality improvement initiatives, but often lack the time and resources to fully analyze their data. OntarioMD's award-winning Insights4Care (i4C) Program addresses these challenges and gives clinicians the tools and support they need to manage population health.

The i4C Program aligns with Ontario's vision for integrated, patient-centred care driven by digital health technology.

## Actionable data insights at your fingertips

Clinicians who use EMRs amass a wealth of important data. They need the ability to easily view and interpret that data in real-time for better population health management, and to drill down to patient-level data to act on it at the point of care. OntarioMD's i4C Dashboard is an EMR-integrated, actionable, population health management tool that lets clinicians who use an OntarioMD-certified EMR:

- see a real-time visual representation of their EMR data using widely recognized primary care indicators (diabetes test results, smoking status, etc.);
- drill down to patient-level data for each indicator and take immediate proactive steps to improve care for that patient;
- standardize their data entry to improve the quality of patient data in their EMR; and
- trend and compare their indicator metrics with other i4C Dashboard-connected clinicians.

The i4C Dashboard is easily expanded to include new and evolving data quality, practice and clinical indicators.

**87%** of i4C Dashboard indicators recorded improvements after only 90 days of use.

“The Dashboard has the potential to provide critical information that will be required to coordinate integrated care services within Ontario Health Teams, as well as providing teams with a monitoring mechanism for quality assurance and improvement.”

## Hands-on quality improvement support

Since 2005, OntarioMD has supported Ontario clinicians to adopt and get full value from their EMR and digital health practice tools. We know that clinicians want access to hands-on practice support at their convenience. The i4C Advisory Service team provides this by incorporating our deep knowledge of practice workflows, digital health technology and change management into one comprehensive service.

We coach clinicians and practice staff on:

- the use of the i4C Dashboard and other useful digital health tools for population health management;
- EMR functionality such as EMR patient reminders, reports and other functions that align with practice priorities for targeted patient care – including improved screening and preventive care measures, complex care and chronic disease management;
- data quality best practices that streamline access to relevant patient information at the point of care; and
- enhanced EMR use and improved practice workflows.

**i4C Advisory Service is available to all users of certified EMRs across Ontario. You do not have to be an i4C Dashboard user to take advantage of our practice support.**

## Get i4C for your practice!

As the i4C Program expands, it will offer new primary care-focused practice enhancement and quality improvement toolkits and resources, learning opportunities, and new ways to share information for system improvement.

The i4C Dashboard is currently available to OSCAR and TELUS PS Suite and Med Access users and will expand to other OntarioMD-certified EMRs. For more information or to get access to the i4C Dashboard or i4C Advisory Service in your practice, email us at [support@ontariomd.com](mailto:support@ontariomd.com).

OntarioMD supports physician practices, nurse practitioner-led clinics and Ontario Health Teams across Ontario to improve their use of electronic medical records (EMRs) and other digital health tools to provide patient-centred, integrated care. Our staff have extensive knowledge of clinician practices and workflows and support them to adapt to new technology. Our quality products and support have made us a successful advisor to more than 17,000 Ontario clinicians and a valuable delivery partner to organizations that need to deploy their products to clinicians in all parts of the province. Our dedication to providing value to the Ontario health system has been recognized with awards for excellence, leadership and innovation.
